

Final Year Research Projects

Some tips

Chapter 3: Methodology

- **Purpose:** To show the process followed in developing the project.
- This chapter explains how the project was carried out.
- It describes the research methods, tools, techniques, and procedures used to solve the identified problem.
- It may include data collection methods, software/hardware used, development models (e.g., Agile, Waterfall), system implementation steps, testing approaches, and project workflow.

Chapter 4: System Analysis & Design (SAD)

- **Purpose:** To demonstrate how the system was planned and structured.
- This chapter focuses on understanding the problem and designing the solution before implementation.
- It includes requirement gathering, feasibility analysis, functional and non-functional requirements, system architecture, use case diagrams, database design, flowcharts, ER diagrams, UI mockups, and other design specifications.

Chapter 5: Results & Discussion

- **Purpose:** To evaluate the effectiveness and performance of the developed system.
- This chapter presents what was achieved after implementation.
- It includes system outputs, screenshots, testing results, performance evaluation, user feedback, and analysis of whether project objectives were met.
- The discussion interprets the findings, highlights successes, challenges, and compares outcomes with expectations.

Key Difference Summary

Methodology: Describes the development process and methods used.

System Analysis & Design: Describes the system requirements, planning, and design structure.

Results & Discussion: Describes the final product, testing outcomes, and evaluation.

Some considerations

- Abstract (**1 paragraph**), statement sections
- All paragraphs should be aligned (**Justify**)
- Tables and Images **aligned center**
- Use **automatic** captions for tables and figures
- Use an **automatic table of contents**, figures, list of tables
- Use **heading levels** to automate the list of tables of contents
- Use **cross-references** on each figure and table. Each image should be **cited in the paragraph above it**. An image or table without a description/citation is useless (remove it).
- Use **automatic citations** and references (Mendeley). Use IEEE style.
